

How to...

MAKE A SKY RULER

Template

Instructions

Print out this sheet and carefully cut round the scales. Make sure your printer doesn't scale the printout down by setting the scale to 100 per cent. The two sections can then be glued to the ruler you have chosen to use. Once glued in place, it is a good idea to seal them with a layer of clear sticky tape.

Cross-piece scale

This scale is for the cross-piece. The marks at A, B, C and D, where the liner cross, indicate the positions of the four pins.

Main scale

Once cut out, glue the two sections here together to form a continuous scale.
